

智能配网系统解决方案

Intelligent Distribution System Solution

DF8000 DF8000 SCADA/ADMS/DMS 高级配电管理系统

DF8000 DF8000 SCADA/ADMS/DMS advanced distribution management system

系统概述

System overview

DF8000 SCADA/ADMS/DMS 高级配电管理系统，面向智能电网建设，应用先进的计算机技术，可以实现电网运行管理、设备管理、生产管理、营销管理、客户服务、资产管理、安全管理、应急管理、决策支持、综合应用等。通过为供电企业提供一体化的解决方案，有效提高了配电网的运行和管理水平，提高了企业的供电可靠性和客户满意度。

DF8000 SCADA/ADMS/DMS advanced distribution management system is a comprehensive solution for intelligent power grid construction. It applies advanced computer technology to realize the operation and management of the power grid, equipment management, production management, marketing management, customer service, asset management, safety management, emergency management, decision support, and comprehensive application. Through providing an integrated solution for power supply enterprises, it effectively improves the operation and management level of the distribution network, and improves the power supply reliability and customer satisfaction of the enterprise.
