

智能输电系统解决方案

Intelligent Transmission System Solution

DF8000 SCADA/EMS 智能输电调度系统

系统概述

DF8000 SCADA/EMS基于CORBA技术，结合了先进的通信技术、数据库技术、面向对象技术、组件技术及Internet技术开发的新一代输电系统解决方案。

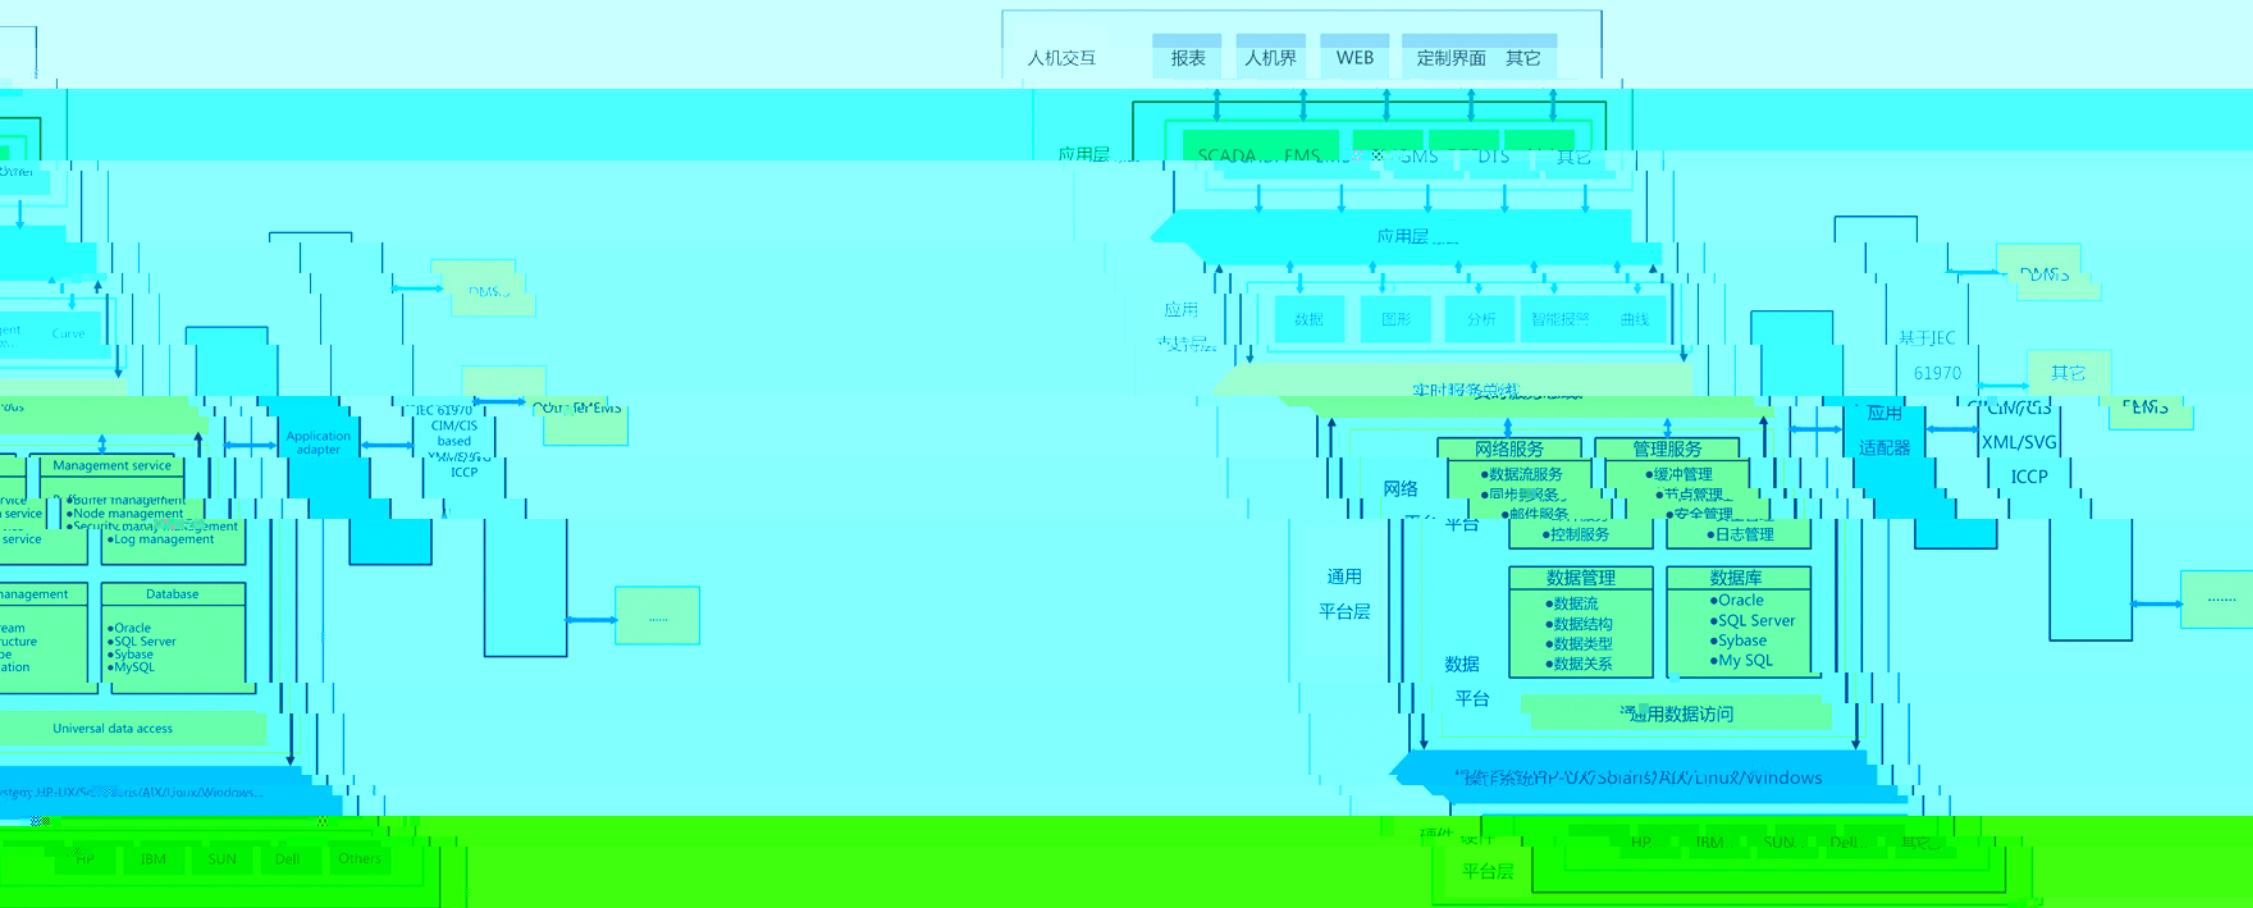

DF8000 SCADA/EMS基于统一平台和模块设计，涵盖了发电控制与应用、电网调度应用、电网运行分析及优化。

该系统充分考虑了系统的开放性、可扩展性和可靠性，同时解决了用户在生产、安全、控制、监视等方面的问题，充分保护用户投资。

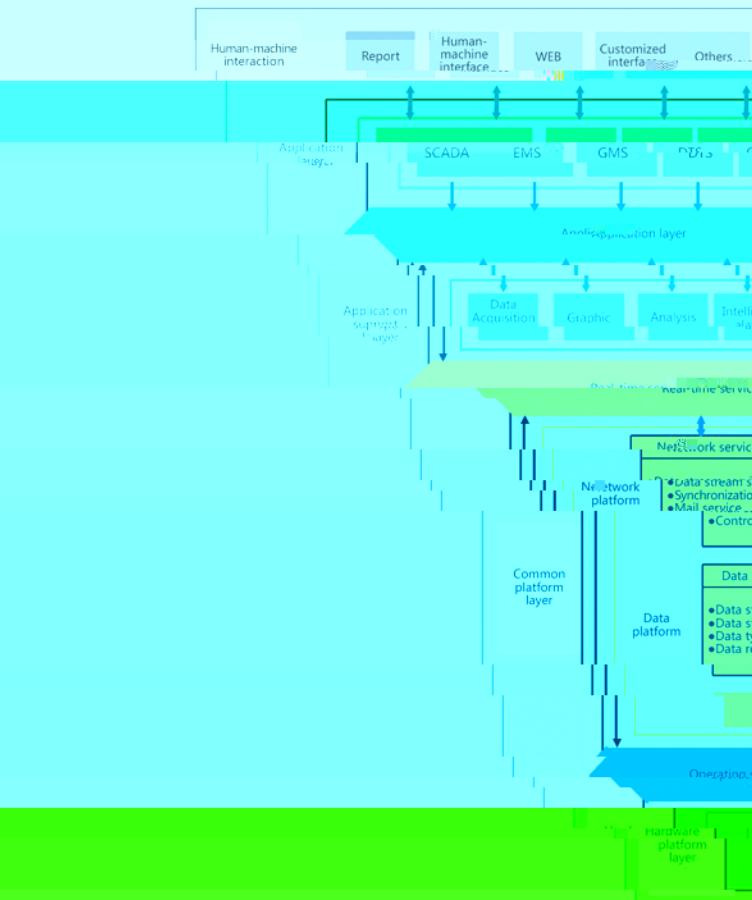

DF8000 SCADA/EMS system is based on CORBA technology, incorporating the latest computer communication technology, database technology, object-oriented technology and Internet technology, so as to develop a new-generation transmission system solution.

DF8000 SCADA/EMS system is based on unified platform and modular design, covering power generation, control and monitoring, operation analysis and optimization problems on the power generation and transmission side, and optimizing the investment of customers through the modular component technology.

二、系统特点

- 遵循IEC61850标准，支持IEC61850智能变电站接入
 - 基于分布式架构实现系统的模块化设计，易于扩展和维护
 - 支持系统硬件设备和操作系统的混搭，即确保系统

Intelligent Transmission System Solution

DECTO ECOUSCADAEMS intelligent transmission line system

Features

- Based on IEC62351 and NERC cyber security standards
 - Follows the IEC 61970/61963 standard and uses the IEC 61968 standard to implement the system, with smart substations, thereby IEC 61850.
 - Based on distributed acquisition and control, training technology, protocols, and power system access.
 - Base on SOA architecture, enabling horizontal integration and vertical penetration of the system.
 - Comprehensive intelligent dispatching function, including the ability to receive information from the power grid, dispatching to the intelligent dispatching center, and mixed hardware and software.
 - Powerful protocol library technology and enabling rapid development and deployment of new protocols.

系统主要功能模块

Main functions	应用类别	应用功能	Application
Real-time monitoring and intelligent alarm Data modeling and data mining Report, remote maintenance and WEB	实时监视与告警 数据建模与数据挖掘 报表、远程维护与WEB	实时监视与告警 数据建模与数据挖掘 报表、远程维护与WEB	Real-time monitoring and intelligent alarm Data modeling and data mining Report, remote maintenance and WEB
Network analysis and optimization Powerflow, short circuit and stability analysis Contingency analysis, static voltage stability Optimal power flow, AVC	网络分析与优化 潮流计算、短路计算 暂态稳定、灵敏度分析 最优潮流、自动电压无功控制	网络拓扑、状态估计 潮流计算、短路计算 暂态稳定、静态电压稳定性 暂态稳定、灵敏度分析 最优潮流、自动电压无功控制	Real-time monitoring and intelligent alarm Data modeling and data mining Report, remote maintenance and WEB
Power generation control and dispatching Load forecasting, AGC, Reserve monitor Economic dispatch, generation scheduling, Interchange transaction scheduling Maintenance scheduling, production cost analysis Unit commitment	发电控制与调度 负荷预测、自动发电控制、备用监视 经济调度、发电计划、交換计划 检修计划、发电费用分析 机组组合	发电控制与调度 负荷预测、自动发电控制、备用监视 经济调度、发电计划、交換计划 检修计划、发电费用分析 机组组合	Real-time monitoring and intelligent alarm Data modeling and data mining Report, remote maintenance and WEB
Intelligent aid decision making overload transferring, intelligent switching, load balancing making load shedding, risk analysis, emergency decision power system risk analysis, power grid risk assessment, aid decision making, breaking of tie line, line selection, tripping sequence, two-phase-to-ground and comprehensive analysis	智能辅助决策 过载转移、智能切换、负荷平衡 负荷削减、风险分析、紧急决策 电力系统风险分析、电网风险评估 辅助决策、断开联络线、线路选择、跳闸顺序、双相接地综合分析	智能辅助决策 过载转移、智能切换、负荷平衡 负荷削减、风险分析、紧急决策 电力系统风险分析、电网风险评估 辅助决策、断开联络线、线路选择、跳闸顺序、双相接地综合分析	停电范围分析、停电负荷估计、计划负荷转移 智能操作票、按需启动辅助决策、合环风险分析 供电风险分析及电网风险评估、 单相接地拉路辅助决策、综合故障分析
Training simulation Steady-state simulation Dynamic-state simulation Dispatcher training Evaluation of training results Test mode	Training simulation 稳态仿真 动态仿真 调度员培训 培训结果评估 测试态	Training simulation 稳态仿真 动态仿真 调度员培训 培训结果评估 测试态	事故应急处置的培训仿真 动态仿真 调度员培训 培训结果评估 测试态
